**Request**
- You are kindly requested to restart your PC once a month.

**Operation**
- You are kindly requested to restart your PC once a month.

---

**To start operation**

1. From floor screen:
   - To control group: Click the [Group icon].
   - To control floor batch process: Click the [Floor batch process] button.
2. From the block screen:
   - To control block: Click the [Block icon].
   - From whole building screen:
     - To control whole building batch process: Click the [Building batch process] button.

---

**At abnormality**

If any abnormality occurs, the following display will appear on the screen of TG-2000A. In addition, abnormal units other than indoor units will be displayed on the [System status display] of each screen.

- **Floor screen**
  - The group icon will be as shown below.
  - [Abnormal indoor unit] [Abnormal outdoor unit] [Abnormal centralized controller communication] [Abnormal general equipment] [Abnormal meter equipment]

- **Block icon**
  - [Block screen] [X] [Orange] is displayed.
  - [Whole building screen] [X] [Orange] or [Red] is displayed.

---

**To reset the abnormality**

After processing the detail of the abnormality, click the [Monitor/Operation] of the [Function selection buttons], and click the group icon generating abnormality. Selecting the [Abnormality reset] clears the abnormality.

---

**Notice**
- The abnormality of communication with Centralized controller can not be cleared.
- Please check the powering of Centralized controller, and the correct LAN wiring with TG-2000A.
