TECHNICAL & SERVICE MANUAL

CITY MULTI Series Wall Mounted R410A

Indoor unit [Model Name] PKFY-P06NBMU-E2

[Service Ref.] PKFY-P06NBMU-E2
PKFY-P06NBMU-E2R1

Revision:
• Added PKFY-P06NBMU-E2R1 in REVISED EDITION-B.
• Some descriptions have been modified.

Notes:
• This manual describes only service data of the indoor units.
• RoHS compliant products have <G> mark on the spec name plate.

OCH516 REVISED EDITION-A is void.

1 SAFETY PRECAUTION

CAUTIONS RELATED TO NEW REFRIGERANT

Cautions for units utilizing refrigerant R410A

<table>
<thead>
<tr>
<th>Do not use the existing refrigerant piping.</th>
</tr>
</thead>
<tbody>
<tr>
<td>The old refrigerant and lubricant in the existing piping contains a large amount of chlorine which may cause the lubricant deterioration of the new unit.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Use “low residual oil piping”</th>
</tr>
</thead>
<tbody>
<tr>
<td>If there is a large amount of residual oil (hydraulic oil, etc.) inside the piping and joints, deterioration of the lubricant will result.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Store the piping indoors, and both ends of the piping sealed until just before brazing. (Leave elbow joints, etc. in their packaging.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>If dirt, dust or moisture enters into refrigerant cycle, that can cause deterioration of refrigerant oil or malfunction of compressor.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>The refrigerant oil applied to flare and flange connections must be ester oil, ether oil or alkylbenzene oil in a small amount.</th>
</tr>
</thead>
<tbody>
<tr>
<td>If large amount of mineral oil enters, that can cause deterioration of refrigerant oil, etc.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Charge refrigerant from liquid phase of gas cylinder.</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the refrigerant is charged from gas phase, composition change may occur in refrigerant and the efficiency will be lowered.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Do not use refrigerant other than R410A.</th>
</tr>
</thead>
<tbody>
<tr>
<td>If other refrigerant (R22, etc.) is used, chlorine in refrigerant can cause deterioration of refrigerant oil, etc.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Use a vacuum pump with a reverse flow check valve.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vacuum pump oil may flow back into refrigerant cycle and that can cause deterioration of refrigerant oil, etc.</td>
</tr>
</tbody>
</table>

Use the following tools specifically designed for use with R410A refrigerant.

The following tools are necessary to use R410A refrigerant.

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Gauge manifold</td>
</tr>
<tr>
<td>Charge hose</td>
</tr>
<tr>
<td>Gas leak detector</td>
</tr>
<tr>
<td>Torque wrench</td>
</tr>
</tbody>
</table>

| Electronic refrigerant charging scale |

Handle tools with care.

If dirt, dust or moisture enters into refrigerant cycle, that can cause deterioration of refrigerant oil or malfunction of compressor.

Do not use a charging cylinder.

If a charging cylinder is used, the composition of refrigerant will change and the efficiency will be lowered.

Use the specified refrigerant only.

Never use any refrigerant other than that specified. Doing so may cause a burst, an explosion, or fire when the unit is being used, serviced, or disposed of. Correct refrigerant is specified in the manuals and on the spec labels provided with our products. We will not be held responsible for mechanical failure, system malfunction, unit breakdown or accidents caused by failure to follow the instructions.

Ventilate the room if refrigerant leaks during operation. If refrigerant comes into contact with a flame, poisonous gases will be released.
2-1. Indoor unit

2-2. Wired Remote Controller <PAR-32MAA> <PAC-YT53CRAU>

Wired remote controller function

The functions which can be used are restricted according to each model.

*Some functions may not be available depending on model types.
2-2-1. Wired Remote Controller <PAR-32MAA>

The functions of the function buttons change depending on the screen. Refer to the button function guide that appears at the bottom of the LCD for the functions they serve on a given screen.

When the system is centrally controlled, the button function guide that corresponds to the locked button will not appear.

Press to turn ON/OFF the indoor unit.

**ON/OFF button**

Press to save the setting.

**SELECT button**

Press to return to the previous screen.

**RETURN button**

Press to bring up the Main menu.

**MENU button**

Operation settings will appear.

When the backlight is off, pressing any button turns the backlight on and it will stay lit for a certain period of time depending on the screen.

- **Function buttons**
  - **F1**: Press to decrease temperature.
  - **F2**: Press to increase temperature.
  - **F3**: Press to change the fan speed.
  - **F4**: Press to go to the previous page.

- **ON/OFF lamp**
  - This lamp lights up in green while the unit is in operation. It blinks while the remote controller is starting up or when there is an error.

- **Function button F1**
  - Main display: Press to change the operation mode.
  - Main menu: Press to move the cursor down.

- **Function button F2**
  - Main display: Press to decrease temperature.
  - Main menu: Press to move the cursor up.

- **Function button F3**
  - Main display: Press to increase temperature.
  - Main menu: Press to go to the previous page.

- **Function button F4**
  - Main display: Press to change the fan speed.
  - Main menu: Press to go to the next page.

When the backlight is off, pressing any button turns the backlight on and does not perform its function. (except for the **ON/OFF** button)
The main display can be displayed in 2 different modes: "Full" and "Basic". The initial setting is "Full". To switch to the "Basic" mode, change the setting on the Main display setting.

**<Full mode>**
All icons are displayed for explanation.

**<Basic mode>**

---

**1. Operation mode**
Indoor unit operation mode appears here.

**2. Preset temperature**
Preset temperature appears here.

**3. Clock (See the Installation Manual.)**
Current time appears here.

**4. Fan speed**
Fan speed setting appears here.

**5. Button function guide**
Functions of the corresponding buttons appear here.

**6. **Appears when the ON/OFF operation is centrally controlled.

**7. **Appears when the operation mode is centrally controlled.

**8. **Appears when the preset temperature is centrally controlled.

**9. **Appears when the filter reset function is centrally controlled.

**10. **Indicates when filter needs maintenance.

**11. Room temperature (See the Installation Manual.)**
Current room temperature appears here.

**12. **Appears when the buttons are locked.

---

Most settings (except ON/OFF, mode, fan speed, temperature) can be made from the Menu screen.

---

OCH516B
Main menu

Press the MENU button. Move the cursor to the desired item with the F1 and F2 buttons, and press the SELECT button.

### Main menu list

<table>
<thead>
<tr>
<th>Setting and display items</th>
<th>Setting details</th>
</tr>
</thead>
</table>
| **Vane · Louver · Vent.** *(Lossnay)* | Use to set the vane angle.  
  - Select a desired vane setting from 5 different settings.  
**Use to turn ON/OFF the louver.**  
  - Select a desired setting from "ON" and "OFF."  
**Use to set the amount of ventilation.**  
  - Select a desired setting from "Off," "Low," and "High." |
| **High power** | Use to reach the comfortable room temperature quickly.  
  - Units can be operated in the High-power mode for up to 30 minutes. |
| **Timer** | **ON/OFF timer**  
  - Use to set the operation ON/OFF times.  
    - Time can be set in 5-minute increments.  
**Auto-Off timer**  
  - Use to set the Auto-Off time.  
    - Time can be set to a value from 30 to 240 in 10-minute increments. |
| **Weekly timer** *(Not valid when the ON/OFF timer is enabled.)* | Use to set the weekly operation ON/OFF times.  
  - Up to 8 operation patterns can be set for each day.  
**Restriction** | **Temp. range**  
  - Use to restrict the preset temperature range.  
    - Different temperature ranges can be set for different operation modes.  
**Operation lock** | Use to lock selected functions.  
  - The locked functions cannot be operated. |
| **Energy saving** | **Auto return**  
  - Use to get the units to operate at the preset temperature after performing energy-save operation for a specified time period.  
    - Time can be set to a value from 30 and 120 in 10-minute increments.  
    - (This function will not be valid when the preset temperature ranges are restricted.)  
**Schedule** *(Not valid when the ON/OFF timer is enabled.)* | Set the start/stop times to operate the units in the energy-save mode for each day of the week, and set the energy-saving rate.  
  - Up to 4 energy-save operation patterns can be set for each day.  
  - Time can be set in 5-minute increments.  
  - Energy-saving rate can be set to a value from 0% or 50 to 90% in 10% increments. |
| **Night setback** *(Not valid when the ON/OFF timer is enabled.)* | Use to make Night setback settings.  
  - Select "Yes" to enable the setting, and "No" to disable the setting. The temperature range and the start/stop times can be set. |
| **Filter information** | Use to check the filter status.  
  - The filter sign can be reset. |
| **Error information** | Use to check error information when an error occurs.  
  - Check code, error source, refrigerant address, unit model, manufacturing number, contact information (dealer's phone number) can be displayed.  
    - (The unit model, manufacturing number, and contact information need to be registered in advance to be displayed.) |
| **Maintenance** | **Manual vane angle**  
  - Use to set the vane angle for each vane to a fixed position. |
| **3D i-see Sensor** | Use to set the following functions for 3D i-see Sensor.  
  - Air distribution  
  - Energy saving option  
  - Seasonal airflow |
| **Initial setting** | **Clock**  
  - Use to set the current time.  
**Main display**  
  - Use to switch between "Full" and "Basic" modes for the Main display.  
    - The initial setting is "Full."  
**Contrast**  
  - Use to adjust screen contrast.  
**Language selection**  
  - Use to select the desired language. |
Select "Input maintenance Info." from the Service menu to bring up the Maintenance information screen. The following settings can be made from the Maintenance Information screen.

- Model name input
- Serial No. input
- Dealer information input

This setting is required only when the operation of City Multi units is interlocked with LOSSNAY units.

Error history: Display the error history and execute delete error history.

Error history of each unit can be checked via the remote controller.

Use to change the maintenance password.

When the remote controller does not work properly, use the remote controller checking function to troubleshoot the problem.
2-2-2. Wired Remote Controller <PAC-YT53CRAU>

Note:
The phrase "Wired remote controller" in this manual refers only to the PAC-YT53CRAU. If you need any information for the other remote controller, please refer to either the installation manual or initial setting manual which are included in remote controller’s box.

* 2 Backlit LCD
* 2 ON/OFF lamp
The lamp will light up in green when turned on, and blink during startup and when an error occurs.

* 2 ON/OFF button
Pressing this button starts and stops the operation.

* 2 FAN button

* 2 VANE button

Note: To set the functions that are not available on this controller (PAC-YT53CRAU) such as Louver, use the centralized controller.

Display section

Note: All icons are displayed for explanation purpose

* 1 CENTRAL icon
Appears when one of the following local operations is prohibited: ON/OFF; operation mode; preset temperature; fan speed; vane.

* 2 CHECK icon
For City Multi, when an error occurs, power indicator will blink, and unit address (3 digits) and check code (4 digits) will blink. Check the error status, stop the operation, and consult your dealer.

* 3 Preset temperature
* Centigrade or Fahrenheit is selectable. Refer to the Installation Manual for details.

In COOL, DRYING, HEAT, or AUTO (single set point) modes

In AUTO (dual set point) or SETBACK modes

Notes:
1. At servicing for outdoor unit, always follow the wiring diagram of outdoor unit.
2. In case of using MA-remote controller, please connect MA remote controller cable in an accessory to the connector. (Remote controller wire is non-polar.)
3. In case of using M-NET, please connect to TB5. (Transmission line is non-polar.)
4. Symbols used in wiring diagram above are, : terminal block, : connector.
5. The of dip sw is the switch position.
6. Please set the switch SW5 according to the power supply voltage.
   - Set SW5 to 230V side when the power supply is 230 volts.
   - When the power supply is 208 volts, set SW5 to 208V side.

8-1-1. Thermistor

<Thermistor characteristic graph>

Thermistor for lower temperature

Room temperature detection thermistor (TH21)
Pipe temperature detection thermistor/liquid (TH22)
Pipe temperature detection thermistor/gas (TH23)

Thermistor R₀=15kΩ ± 3%
Fixed number of B=3480 ± 2%

\[ R_t = 15 \exp \left\{ \frac{3480 \left( \frac{1}{273+(t-32)/1.8} - \frac{1}{273} \right)}{1.8} \right\} \]

- 30°F: 15.8 kΩ
- 50°F: 9.6 kΩ
- 70°F: 6.0 kΩ
- 80°F: 4.8 kΩ
- 90°F: 3.9 kΩ
- 100°F: 3.2 kΩ

8-1-2. Liner expansion valve

1) Operation summary of the linear expansion valve
- Linear expansion valve open/close through stepping motor after receiving the pulse signal from the indoor controller board.
- Valve position can be changed in proportion to the number of pulse signals.

<Connection between the indoor controller board and the linear expansion valve>
<Output pulse signal and the valve operation>

<table>
<thead>
<tr>
<th>Output (Phase)</th>
<th>Output</th>
</tr>
</thead>
<tbody>

<td>1</td>
<td>ON</td>
</tr>
<tr>
<td>2</td>
<td>OFF</td>
</tr>
<tr>
<td>3</td>
<td>OFF</td>
</tr>
<tr>
<td>4</td>
<td>ON</td>
</tr>
</tbody>
</table>

Closing a valve: 1 → 2 → 3 → 4 → 1
Opening a valve: 4 → 3 → 2 → 1 → 4

The output pulse shifts in above order.

Note:
- When linear expansion valve operation stops, all output phase become OFF.
- At phase interruption or when phase does not shift in order, motor does not rotate smoothly and motor will lock and vibrate.
- When the power is turned on, 2200 pulse closing valve signal will be sent till it goes to point ⊗ in order to define the valve position.
- When the valve moves smoothly, there is no sound or vibration occurring from the linear expansion valves, however, when the pulse number moves from ⊗ to ⊗ or when the valve is locked, more sound can be heard than in a normal situation.
- Sound can be detected by placing the ear against the screw driver handle while putting the screw driver tip to the linear expansion valve.

Trouble shooting

### OPERATION PROCEDURE

1. **Removing the lower side of the indoor unit from the installation plate**

   When there is a removing plate:
   (1) Remove the corner box at the right lower side of the indoor unit and remove the removing plate from the corner box. (See Figure 3)
   (2) Insert the removing plate at the back side of the corner box to remove the indoor unit.
   (3) Remove the hook by pulling the lower side of the indoor unit down as shown in the Figure 1.

   When there is no removing plate or it cannot be used for some reason:
   (1) Remove the front panel.
   (2) Insert the screwdriver to the corner hole at both left and right side as shown in the Figure 2.
   (3) Push it up, then pull down the lower side of the indoor unit and remove the hook.

2. **Removing the front panel**

   Note: Before removing the front panel, leave the open space at upper side of the vane approximately 2 to 3 cm.
   (1) Remove the 3 screw caps then remove the 3 set screws. (See Photo 1)
   (2) Remove the grille.
   (3) Remove the left side of the front panel, then right side.
   (4) After removing the lower side of the front panel a little, remove it as pulling the upper side toward you.
   Note: Please pay attention to the nozzle assembly.

   **Installing the front panel**
   (1) Insert the lower side of the front panel under the vane.
   (2) Set the upper side of the front panel. (See Figure 4)
   (3) Set the lower side of the front panel then fix it with the screws.
   (4) Press the area indicated as arrow sign and set it to the air conditioner unit.
   (5) Attach the screw caps.

## OPERATION PROCEDURE

### 3. Removing the indoor controller board and indoor power board

1. Remove the front panel. (Refer to procedure 2)
2. Remove the electrical box cover (screw 4 × 10). (See Photo 2)

**INDOOR CONTROLLER BOARD**

(1) Disconnect the following connectors on the indoor controller board.
- CN60, CN5V, CN90, CN29, CN21
- CN42, CN81, CN3A, CN20

(2) Pull out the indoor controller board toward you, then disconnect the rest of connectors.
- CN53M, CN35M (See Photo 3)

**INDOOR POWER BOARD**

(1) Disconnect the following connectors on the indoor power board.
- FAN, CN53P, CN35P, CN2M, CND

(2) Remove the earth wire for TAB1.

(3) Pull out the indoor power board toward you. (See Photo 3)

### 4. Removing the nozzle assembly and drain hose

1. Remove the front panel. (Refer to procedure 2)
2. Remove the electrical box cover. (See Photo 2)
3. Disconnect the connector (CN5V) on the indoor controller board.
4. After unhook the right side of the corner box, press the upper left side and remove the corner box.
5. Remove the nozzle assembly from the fixture. (See Photo 4)
6. Remove the drain hose.

### 5. Removing the fan guard

1. Remove the nozzle assembly and drain hose. (Refer to procedure 4)
2. Remove the screws of fan guard.
3. Remove the fan guard.

### OPERATION PROCEDURE

#### 6. Removing the electrical box

(1) Remove the front panel. (Refer to procedure 2)  
(2) Remove the electrical box cover. (See Photo 2)  
(3) Remove the water cut. (See Photo 3)  
(4) Pull the nozzle assembly toward you as opening the catch of the nozzle assembly. (See Photo 4)  
(5) Disconnect the indoor/outdoor transmission wiring of TB5.  
(6) Disconnect the power supply wiring of TB2.  
(7) Disconnect the relay connector of MA-remote controller.  
(8) Disconnect the following connector on the indoor controller board.  
- CN60, CN5V, CN29, CN21, CN90, (CN3A)  
(9) Disconnect the connector (FAN) on the indoor power board.  
(10) Remove the ground wire fixing screw.  
(11) Pull the disconnected lead wire out from the electrical box.  
(12) Push up the upper fixture catch to remove the box, then pull the lower fixture and remove it from the box fixture.

#### 7. Removing the line flow fan and the fan motor

(1) Remove the front panel. (Refer to procedure 2)  
(2) Remove the nozzle assembly. (Refer to procedure 4)  
(3) Remove the electrical parts box. (Refer to procedure 6)  
(4) Remove the fixture while pressing the right side of motor fixture catch. (See Photo 7)  
(5) Remove the left side of the motor fixture.  
(6) Loosen the set screw which fixes the line flow fan to the fan motor, then remove the fan motor by sliding it to the right side. (See Photo 7)  
(7) Pull the left-hand side of the heat exchanger toward you. (See Photo 9)  
(8) Remove the line flow fan.

---

### OPERATION PROCEDURE

**8. Removing the vane motor**

1. Remove the front panel. (Refer to procedure 2)
2. Remove the screw of the electrical parts box cover, and remove the cover.
3. Remove the 2 screws of the vane motor. Disconnect the relay connector and remove the motor from the shaft.
4. Disconnect the vane motor connector (CN5V) on the indoor controller board.

### 9. Removing the pipe temperature detection thermistor/liquid and the pipe temperature detection thermistor/gas**

1. Remove the front panel. (Refer to procedure 2)
2. Remove the electrical box cover. (See Photo 2)
3. Remove the water cut. (See Photo 3)
4. Cut the wiring fixed band.
5. Remove the pipe temperature detection thermistor/liquid and the pipe temperature detection thermistor/gas. (See Photo 10)
6. Disconnect the connector (CN29) (CN21) on the indoor controller board.
